| Maximum Marks | 2 Marks                                                              |

### Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

| S.No. | Parameter                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.    | <b>Problem Statement (Problem to be solved)</b> | Patients who need diagnostic tests depend on phone calls, walk-ins and paper reports. Booking, payment and report handling are manual and disconnected, so patients face long queues, overbooked slots, unclear pricing and late or lost reports, while labs struggle to manage slots, technicians and records in one place.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 2.    | <b>Idea / Solution description</b>              | <p>A centralized Diagnostic Test Center Portal built on the ServiceNow platform using Service Portal, where:</p> <ul style="list-style-type: none"> <li>• Patients browse tests and packages, pick a date and time slot, choose lab visit or home sample collection, pay and track the appointment.</li> <li>• Real-time slot validation prevents overbooking, and dynamic pricing applies tests, packages, home collection and discounts.</li> <li>• Flow Designer workflows handle validation, payment confirmation, optional approval, cancellation and rescheduling.</li> <li>• Email notifications and scheduled jobs keep patients informed and update status from Scheduled to Completed.</li> <li>• Lab technicians upload reports, admins manage the catalog, pricing, slots and technicians, and role-based ACLs protect all data.</li> </ul> |
| 3.    | <b>Novelty / Uniqueness</b>                     | <ul style="list-style-type: none"> <li>• One centralized low-code platform that joins booking, slots, pricing, payments, workflow, notifications and reports.</li> <li>• Real-time slot validation together with home sample collection scheduling.</li> <li>• Configurable workflows and approvals that admins can change without rewriting the application.</li> <li>• Patient-level data filtering and role-based security for sensitive medical data.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                    |
| 4.    | <b>Social Impact / Customer Satisfaction</b>    | <ul style="list-style-type: none"> <li>• Saves patients time and travel, and helps elderly or ill patients through home sample collection.</li> <li>• Clear pricing and automatic updates build trust and reduce anxiety.</li> <li>• Faster, secure access to reports supports quicker treatment decisions.</li> <li>• Less paperwork and fewer phone enquiries for the center, so staff can focus on patient care.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 5.    | <b>Business Model (Revenue Model)</b>           | <ul style="list-style-type: none"> <li>• Revenue from diagnostic test and package bookings, including premium slots.</li> <li>• Home sample collection charges.</li> <li>• Health check-up package pricing with discount rules to bring repeat patients.</li> <li>• Possible future revenue from partner labs and subscription health plans.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 6.    | <b>Scalability of the Solution</b>              | <ul style="list-style-type: none"> <li>• Built as a scoped ServiceNow application with modular widgets, reusable Script Includes and configurable Flow Designer actions.</li> <li>• New tests, packages, slots, technicians and branches are added through custom tables and forms without code changes.</li> <li>• Ready for future additions: external payment gateways, SMS notifications, a doctor portal and analytics.</li> <li>• Runs on the ServiceNow cloud platform, so it can grow with the number of patients.</li> </ul>                                                                                                                                                                                                                                                                                                                   |
